The visualization shows all the languages provided by 100 famous mobile applications which are used in the US and the UK.

We can see that the highest contribution is English at 97%, meaning that the majority of apps support the English language, followed by German.

Two things are misleading: Firstly, the sizes of certain bubbles are the same even though the percentages of the apps supporting that language are different. Secondly, we can see that there is a drastic change in German and Spanish bubble sizes even when the percentage difference is just 1%.
